4 . Locate the specific engine desired . Correct torque specifications are shown in foot-pounds in bold type . Torque specifications are shown either as an exact figure, or a specific range . Follow any special instructions or multi-step directions carefully to assure correct final torque .

*Torque Tables*

One may consider that engines making torque at a lower rpm tend to work better in marine applications due to the fact that “most” boats tend to plane in the range of 2,000 – 3,000 rpm. It’s not by chance that most marine engine manufacturers continue using the larger displacement – lower rpm, cast iron marine engines because of this fact.

The boat is a 1988, the original engine was replaced with a Mercury Marine part#14152A 1 long block in 1994. This part is currently out of production so Mercury couldn't give me any specs. This engine appears to have aluminum heads. My question is if this block features 4 bolt mains, forged pistons and crank.
