Component.Name = "NewName" Check if Sheet Name Exists. We created a function to test if a Sheet with a particular name ...

VBA Get Sheet Name / Rename Sheet - Automate Excel

Here ThisWorkbook refers to the workbook where we are writing the code. By referring to this word, we can execute all the tasks in the current workbook and avoid lengthy code with a fully named workbook name. I am sure you must have also seen the word “ Active Workbook ” when you are referring to the others code.

Do you have creative ideas that you wish you could transform into code? Do you want to boost your problem solving and logic skills? Do you want to enhance your career by adopting an algorithmic mindset? In our increasingly digital world, coding is an essential skill. Communicating an algorithm to a machine to perform a set of tasks is vital. Beginner ' s Guide to Code Algorithms: Experiments to Enhance Productivity and Solve Problems written by Deepankar Maitra teaches you how to think like a programmer. The author unravels the secret behind writing code – building a good algorithm. Algorithmic thinking leads to asking the right question and enables a shift from issue resolution to value creation. Having this mindset will make you more marketable to employers. This book takes you on a problem-solving journey to expand your mind and increase your willingness to experiment with code. You will:

Access Free Activeworkbook Sheet

Learn the art of building an algorithm through hands-on exercises Understand how to develop code for inspiring productivity concepts Build a mentality of developing algorithms to solve problems Develop, test, review, and improve code through guided experimentation This book is designed to develop a culture of logical thinking through intellectual stimulation. It will benefit students and teachers of programming, business professionals, as well as experienced users of Microsoft Excel who wish to become proficient with macros.

This book is intended for anyone who wants to study the principles of writing code. The important thing is to think well before programming. After a brief history of the development of calculators and computers, you will learn how to design algorithms using everyday examples, such as a recipe of a cheese soufflé, a bubble sort, and a sequential and dichotomous method to sort out numbers in a list. You will discover how to program with Excel VBA and JavaScript adapted to Google Sheets. The objective of this manual is to help you understand how to automate repetitive tasks, while discovering the world of variables, loops, conditions, functions and procedures. Finally, because Internet pages are part of our daily lives, HTML and CSS will also be introduced. ABOUT THE AUTHOR Rémy Lentzner has been a computer trainer since 1985. Specialized in the mastery of office automation tools, he assists companies in the professional training of their employees. Self-taught, he has some fifteen computer books to his credit.
