Meteorology is a branch of the atmospheric sciences which includes atmospheric chemistry and atmospheric physics, with a major focus on weather forecasting. The study of meteorology dates back millennia, though significant progress in meteorology did not occur until the 18th century. The 19th century saw modest progress in the field after weather observation networks were formed across broad ...

Atmospheric Chemistry and Physics Discussions

Overview. The atmospheric sciences naturally include the study of the composition of earth's atmosphere and the transformation of chemical compounds in the atmosphere. The gaseous, liquid, and solid phases determine the radiative and dynamical properties of the atmosphere and sustain life on this planet. In turn, life influences the chemical composition of the atmosphere in both beneficial and deleterious ways.
