This book should be of interest to undergraduate courses in political administration, particularly those with an emphasis on local government.

CAMELOT introduces students the interactions of contending and contentious groups and individuals whose values and goals range from radical to reactionary. It addresses such issues as equal opportunity, right to life, freedom of expression, affirmative action, property rights, gay rights, and more. Students quickly learn that competing interests and viewpoints - with their varying degrees of organization and cohesiveness - make political decision-making complex, time consuming, exciting, and often difficult to predict.

This volume examines the EU's changing educational context and its challenges. Based on an extensive survey of more than 2000 European Studies courses in 30 European countries, it maps and analyses the features of teaching methodologies as they emerge from both disciplinary as well as interdisciplinary curricula. It presents a series of case studies on some of the most-used innovative teaching tools emerging in the field such as simulation games, e-learning, problem based learning, blended learning, and learning through the use of social networks. Based on the contributors' own experiences and academic research, the book examines both strengths and possible pitfalls of these increasingly popular methods. The book's critical approach will inspire educators and scholars committed to improving the teaching methods and tools in the area of European Studies and other programmes of higher education facing similar challenges.

This volume brings together both political and educational scientists. While educational research literature has so far not systematically addressed the tool of simulations of decision-making, political scientists have hardly used insights from research on assessment or on motivation and interest of students. Almost all political science publications on simulations merely discuss how to implement the tool in class and fall short of providing evidence of the effects on student outcomes such as increased interest and performance. Combining the two disciplines is mutually enriching. Political science benefits from state of the art educational science measuring and testing of the claims made by the proponents of simulations, while educational sciences adds the systematic analysis of simulations of decision-making to their list of empirical objects, which also adds insights to the theories on the affective component of student learning. It is the explicit aim of the volume to address how simulating decision-making environments fosters learning. Implications for research and practice regarding student learning are addressed in all chapters.

With a focus on providing concrete teaching strategies for scholars, the Handbook on Teaching and Learning in Political Science and International Relations blends both theory and practice in an accessible and clear manner. In an effort to help faculty

As the study of environmental policy and justice becomes increasingly significant in today's global climate, standard statistical approaches to gathering data have become less helpful at generating new insights and possibilities. None of the conventional frameworks easily allow for the empirical modeling of the interactions of all the actors involved, or for the emergence of outcomes unintended by the actors. The existing frameworks account for the "what," but not for the "why." Heather E. Campbell, Yushim Kim, and Adam Eckerd bring an innovative perspective to environmental justice research. Their approach adjusts the narrower questions often asked in the study of environmental justice, expanding to broader investigations of how and why environmental inequities occur. Using agent-based modeling (ABM), they study the interactions and interdependencies among different agents such as firms, residents, and government institutions. Through simulation, the authors test underlying assumptions in environmental justice and discover ways to modify existing theories to better explain why environmental injustice occurs. Furthermore, they use ABM to generate empirically testable hypotheses, which they employ to check if their simulated findings are supported in the real world using real data. The pioneering research on environmental justice in this text will have effects on the field of environmental policy as a whole. For social science and policy researchers, this book explores how to employ new and experimental methods of inquiry on challenging social problems, and for the field of environmental justice, the authors demonstrate how ABM helps illuminate the complex social and policy interactions that lead to both environmental justice and injustice.

Illuminates how local board systems operate and the motivations and experiences of their members. While 97 percent of all American cities are smaller than 50,000 and millions of Americans experience civic life in these communities, what we know about their politics and governance is limited, particularly how local board systems operate, who the board members are, what motivates them to serve, and what they think about their experiences. Drawing on a unique and extensive set of survey data from board members, mayors, and city councilors in sixty cities across six states, *Government in the Twilight Zone* significantly expands our knowledge of small-city boards and politics. By embedding the empirical research in the historical trajectory of small towns, John R. Baker provides a rich narrative that discusses the role of entities such as planning commissions, parks and recreation boards, and zoning appeals boards. He also clarifies how board and commission members are recruited in small cities, explains how these organizations work to make the decisions required of them, and reveals what they and their city councilors and mayors think about their importance and effectiveness. "Professional city managers have long known about the influence and importance of advisory boards and commissions in the decision making in local government. Thank you, Rob, for shedding a little light on these groups that operate in the twilight of government." – Scot E. Simpson, City Administrator, River Falls, Wisconsin
