Catalyst Handbook Chemistry An emission control catalyst is usually a catalytic coating applied to a ceramic or metallic substrate. The catalyst has open channels and the gases react as they pass through. Some catalysts are designed to be able to store reagents (e.g. oxygen, ammonia) to enhance performance or even to act as a chemical trap, as in the case of NO Catalyst Handbook - Johnson ...

In general, catalytic action is a chemical reaction between the catalyst and a reactant, forming chemical intermediates that are able to react more readily with each other or with another reactant, to form the desired end product. During the reaction between the chemical intermediates and the reactants, the catalyst is regenerated.
