An Insight Into

When it entered service with the British Army in 1983, the 62-tonne Challenger 1 was the first of a new generation of main battle tanks. Originally intended

Tank Owners

Online Library Challenger 1

for use by the Imperial Iranian Army, orders for the tank were cancelled when the Shah was deposed after the Islamic Revolution in 1979, and the design was accepted by the British Ministry of Defence as a replacement for the Chieftain.

Main Battle

For much of the Cold War, the British Army's main battle tanks (MBT) were first the Centurion and then the Chieftain. The question of the latter's replacement became urgent when in 1980 MBT80 was

The Challenger 2 is the current Main Battle Tank of the British Army and represents the culmination of 80 years of tank

design. In 1987, its design was presented to the Ministry of Defence in response to a requirement to replace the Chieftain MBT that had been partially superseded by the Challenger 1 MBT. Production began in 1993, and the tank finally entered

Tank Owners

service in 2002.

The tank recently appeared in Iraq, where it proved indispensable during the battle of Basra. This book covers the

evolution of the Challenger 2, from its origins and testing to its involvement in the Middle East and

The successor to the Chieftain from the 1960's, work began in 1976 on development of a new MBT specifically for the Iranian army, who needed a more capable tank than

the Chieftain to suit their climatic and geographical conditions.

However, once the revolution occurred in 1979 the British army was

reluctantly forced to accept this new design themselves.

Once in service there were technical problems

resulting in various modifications. However, the Challenger would go on to great success in the Gulf War, playing crucial roles in both Desert Storm and Desert Sabre operations. In this book, Simon Dunstan examines this tank in detail, evaluating its

Cold War. It incorporated a lot of revolutionary design features, although some did not work as well as expected. For example, in order to reduce height the driver lay in a reclining position and changed gear with his foot. The L11 120mm gun

used a self-combusting bagged charge instead of a brass cartridge case (the gun proved to be highly successful); and the tank was powered by a multi-fuel engine. The Chieftain was continually upgraded during its service life: later
