Abstract. A sine wave oscillator is an amplifier that uses positive feedback in order to produce a sinusoidal output voltage, without any input signal from an

external source. In the section on amplifiers, it was found that the removal of C_e in the BJT amplifier, or C_s in the FET amplifier, resulted in inverse or negative feedback at the emitter, or source, of those stages of amplification.

An electronic sine wave oscillator is an electronic circuit that produces a periodic, oscillating electronic signal, often a sine wave or a square wave. Oscillators convert direct current (DC) from a power supply to an alternating current (AC) signal. They are widely used in many
