Much NLP training today views Master Practitioner level as simply containing bigger, more complex techniques than Practitioner level, but this is a misconception. Being a Master Practitioner isn't about techniques at all, it's about letting go of techniques altogether and getting to grips with the very foundation of NLP itself - modelling high performers. Modelling is the method behind every NLP technique, and by understand how to extract and replicate the mental processes of high performance, you will transcend everything that you have learned at Practitioner level. The NLP Master Practitioner Manual will show you how to: Break down any NLP technique and adapt it effortlessly to any situation, even in everyday conversation Extract the innate talents of high performers in any field and replicate those talents Learn how to create coaching and training programs that install high performance models in your learners This NLP Master Practitioner manual is the result of 20 years research and application of NLP by one of its most innovative, practical and results oriented trainers and writers. Peter Freeth has pioneered many recognised developments in NLP's approach and techniques that are now used by countless trainers and professionals, worldwide.

To get back at the man who insulted and refused her, Marianne Holton kidnaps him and forces him to marry her before she's sold off. Spirited and virginal Lady Marianne Holton seeks revenge on Lord Blaise Gray, a man she has never met, for insulting her by letter and refusing to wed her. She plans to force his hand before she is married off to a man known for his cruelty towards women. Her plan for a forced marriage goes well, but she forced the wrong man. Instead of marrying Blaise, she married his handsome, thirty-six year old father, Lord William Gray, Earl of Graystone. To her delight, the plan works. To her horror, she married the wrong man. William, a lord who had previously given up on life, is enraged to have had his hand forced by a woman who had the audacity to not even know his true identity until it was too late, and he vows to make use of his new bride as soon as possible. However, he finds himself unable to destroy the fiery spirit that took charge of her own destiny, and makes a new vow to protect her from the scorned man who would have been her husband, and make her his true wife.

Have you ever wondered why students too often have only a rudimentary understanding of mathematics, why even rich and exciting hands-on learning does not always result in "real" learning of new concepts? The answer lies in whether students have actually learned mathematical concepts, rather than merely memorizing facts and formulas. Concept-Rich Mathematics Instruction is based on the constructivist view that concepts are not simply facts to be memorized and later recalled, but rather knowledge that learners develop through an active process of adapting to new experiences. The teacher's role is critical in this process. When teachers prompt students to reflect on their experiences and report and answer questions verbally, students must re-examine and even revise their concepts of reality. Meir Ben-Hur offers expert guidance on all aspects of Concept-Rich Mathematics Instruction, including *

- * Identifying the core concepts of the mathematics curriculum. *
- * Planning instructional sequences that build upon concepts that

students already understand. * Designing learning experiences that provoke thoughtful discussions about new concepts and prepare students to apply these concepts on their own. * Identifying student errors, particularly those caused by preconceptions, as important sources of information and as key instructional tools. * Conducting classroom dialogues that are rich in alternative representations. * Using a variety of formative assessment methods to reveal the state of students' learning. * Incorporating problem-solving activities that provoke cognitive dissonance and enhance students' cognitive competence. Concept-Rich Mathematics Instruction is grounded in the belief that all students can learn to think mathematically and solve challenging problems. If you're looking for a powerful way to improve students' performance in mathematics and move closer to fulfilling the NCTM standards, look no further: this approach provides the building blocks for constructing a first-class mathematics program.
