A distillation column is both multivariable and nonlinear - and it consumes immense quantities of energy. Yet, despite the design challenges it presents, it is still the most popular unit operation for refining in industrial plants today.

Module 3.1: Control of Distillation Columns

The distillation column itself is made up of a series of stacked plates. A liquid feed containing the mixture of both liquids enters the column at one or more points. The liquid flows over the plates, and vapour bubbles up through the liquid via

Download Ebook Design Of Distillation Column Control Systems

holes in the plates. As liquid travels down the column, vapour comes in contact with it many times (due to the multiple plates).

Distillation Column Control - Control System Design

Most two-product distillation columns can be described as 5×5 plants, but the

Abstract. The optimal design of dividing wall columns is a non-linear and multivariable problem, and the objective function used as optimization criterion is generally non-convex with several local optimums. Considering this fact, in this paper, we studied the design of dividing
