powered by the digital revolution, the media has become a victim of circumstance. And so, fact-checking organisations like Dubawa are the rescuers, the warriors of truth, to help the independent ...

In recent years, the powerful social, cultural and economic changes wrought by digital technology have led many to forecast the end of the university as we know it. This book employs extensive research and case studies to explain why these predictions, even if perhaps somewhat premature, are on solid ground. The Digital Revolution and the Coming of the Postmodern University shows how the internet, high-speed electronic communications and personal computers necessitate a radical rethinking of what is meant by 'higher education'. The book calls into question both the traditionalist's scepticism about the benefits of new technology, and the corporate e-learning advocate's failure to grasp that education is more than what happens on a computer screen. The author provides concrete data and models for more democratic, restructured systems of instruction that not only take advantage of advanced learning technologies, but promote the globalisation of higher education. This is an essential read for anyone concerned about the future of higher education.

In recent years, the powerful social, cultural and economic changes wrought by digital technology have led many to forecast the end of the university as we know it. This book employs extensive research and case studies to explain why these predictions, even if perhaps somewhat premature, are on solid ground. The Digital Revolution and the Coming of the Postmodern University shows how the internet, high-speed electronic communications and personal computers necessitate a radical rethinking of what is meant by 'higher education'. The book calls into question both the traditionalist's scepticism about the benefits of new technology, and the corporate e-learning advocate's failure to grasp that education is more than what happens on a computer screen. The author provides concrete data and models for more democratic, restructured systems of instruction that not only take advantage of advanced learning technologies, but promote the globalisation of higher education. This is an essential read for anyone concerned about the future of higher education.

The only book of its kind, The New Inquisitions is an exhilarating investigation into the intellectual origins of totalitarianism. Arthur Versluis unveils the connections between heretic hunting in early and medieval Christianity, and the emergence of totalitarianism in the twentieth century. He shows how secular political thinkers in the nineteenth century inaugurated a tradition of defending the Inquisition, and how Inquisition-style heretic-hunting later manifested across the spectrum of twentieth-century totalitarianism. An exceptionally wide-ranging work, The New Inquisitions begins with early Christianity, and traces heretic-hunting as a phenomenon through the middle ages and right into the twentieth century, showing how the same inquisitional modes of thought recur both on the political Left and on the political Right.

Life confronts us with an endless stream of questions. Some are trivial. But some draw us into the deepest dimensions of human inquiry, a place where our decisions have profound implications for life and faith. Is there a God, and if so, how can I know anything about who or what God is? Is the quest for truth an elusive dream? How should I live and what should I value? What happens at the end of my biological existence? These questions lead people of every creed and belief to consider important existential concepts. But many people wrestle with the relationship between faith and reason as they dig into the roots of this theological and philosophical pursuit. Does a shared interest in a common set of questions indicate that philosophy and theology are close kin and allies, or are they competitors vying for our souls, each requiring a loyalty that excludes the other? In Faith and Reason, Steve Wilkens edits a debate between three different understandings of the relationship between faith and reason, between theology and philosophy. The first viewpoint, Faith and Philosophy in Tension, proposes faith and reason as hostile, exclusive opposites, each dangerous to the integrity of the other. The second, Faith Seeking Understanding, suggests that faithful Christians are called to make full use of their rational faculties to aid in the understanding and interpretation of what they believe by faith. In the third stance, Thomistic Synthesis, natural reason acts as a handmaiden to theology by actively pointing people toward salvation and deeper knowledge of spiritual truths. Bringing together multiple views on the relationship between faith, philosophy and reason, this introduction to a timeless quandary will help you navigate, with rigor and joy, one of the most significant discussions of the Christian community.

"This book presents practical conversations with philosophical and theoretical concerns regarding the use of digital technologies in the educational process, challenging the assumption that information accessibility is synonymous with learning"--

Today, all librarians face daunting challenges posed by trends in technology, publishing, and education as the impact of a globalising information economy forces a rethink of both library strategic directions and everyday library operations. This book brings together the main issues and dilemmas facing libraries; the book clearly shows how to deal with them, and provides a best-practice guide to the solutions. Provides analysis of recent trends and relevant and viable solutions to problems facing all librarians Written by a highly knowledgeable and well-respected practitioner in the field Draws on the author's international and practical experience in libraries and experience of leading-edge developments in the field

The 1960s and the 1970s marked a generational shift in architectural discourse at a time when the revolts inside universities condemned the academic institution as a major force behind the perpetuation of a controlling society. Focusing on the crisis and reform of higher education in Italy, The University as a

Settlement Principle investigates how university design became a lens for architects to interpret a complex historical moment that was marked by the construction of an unprecedented number of new campuses worldwide. Implicitly drawing parallels with the contemporary condition of the university under a regime of knowledge commodification, it reviews the vision proposed by architects such as Vittorio Gregotti, Giuseppe Samonà, Archizoom, Giancarlo De Carlo, and Guido Canella, among others, to challenge the university as a bureaucratic and self-contained entity, and defend, instead, the role of higher education as an agent for restructuring vast territories. Through their projects, the book discusses a most fertile and heroic moment of Italian architectural discourse and argues for a reconsideration of architecture's obligation to question the status quo. This work will be of interest to postgraduate researchers and academics in architectural theory and history, campus design, planning theory, and history.

Distance learning is becoming increasingly prevalent in educational settings around the world as it provides more flexibility and access to classes for students and educators alike. While online classrooms are proving to be popular, there is a significant gap in the personalization and humanization of these courses. The Handbook of Research on Humanizing the Distance Learning Experience features empirical research on promoting the personalization of online learning courses through presence, emotionality, and interactivity within digital classrooms. Highlighting best practices and evaluating student perceptions on distance learning, this handbook will appeal to researchers, educators, course designers, professionals, and administrators.

University ethics is everyone's business, and big business is what the university is all about whether in the US, Europe or the rest of the world. How this has come about is less important than that it has, and is being taken very seriously by global and national forces. The important issue confronting higher education is its assumed role in guaranteeing economic prosperity. Governments are no longer content to let research leak out serendipitously into the economy. The Post-Industrial Society, Information Society, Knowledge Economy and Smart Economy require nothing less than commercially directed research producing innovatory products. The public interest is reduced to economic measures. The political, social and moral implications of changing practices in the university are rarely acknowledged in the rise of the New Alchemy. This book examines the resulting ambiguities and questionable evidence in favour of current polices.

How people are using information technology to reshape the way the world communicates, works, and learns—across organizational boundaries and through all sectors of society.
