Overview R is a free software environment for statistical computing and graphics. It is what 's known as ' open source ' , which means that unlike commercial software companies that protectively hide away the code on which their software is based, the people who developed R allow everyone to access their code. This open source philosophy allows anyone,...

Introduction to R – Discovering Statistics

Overview. JASP is a free, open-source, cross-platform package for statistical analysis developed at the University of Amsterdam ( thanks to funding from the ERC grant “ Bayes or Bust! ” from the European Union). It has less features than SPSS and R, but has many advantages. With respect to R, it is more user-friendly in that it offers a nice user-interface and real-time updating of output.
