A dual diagnosis of co-occurring drug addiction and psychological trauma can be challenging. The most effective kind of treatment for this combined condition is care that is specifically designed to target both psychological trauma as well as drug addiction. This kind of treatment might involve psychotherapy and medication.

**Psychological Trauma and Drug Addiction | Dual Diagnosis**

Co-occurring mental health conditions and substance abuse affect nearly 8.9 million yearly. Only 7.4% receive appropriate treatment. Few programs specialize in treating dual diagnosis. Research reveals that people with co-occurring disorders need specialized integrated treatment.

**Difference Between Abuse and Addiction | Dual Diagnosis**

A Dual Diagnosis can be made up of any combination of a mental disorder (anxiety, depression, bipolar disorder) and addiction (drugs, alcohol, sex, gambling). Dual Diagnoses that include depressive disorders are among the most common forms of the problem; in fact, the Journal of Clinical Psychiatry reports that one in three adults who struggle with alcohol or drug abuse also suffers from depression.

**Depression and Addiction | Dual Diagnosis**

A Dual Diagnosis occurs when a single patient is diagnosed with both a mental health disorder and a substance abuse problem.

**Facts and Statistics About Dual Diagnosis**

Economic status refers to the bracket or class a person or household falls into based on their income production level. In 2012, around 122,459,000 households had income during the year, and 4.5 percent of them brought in more than \$200,000.[1] Those who made between \$39,736 and \$104,087 that year were considered to be of middle ...

**Economic Status and Abuse | Dual Diagnosis**

Dual diagnosis is a term used to describe a person who is diagnosed with a mental illness a substance use or abuse and disorder at the same time. More than half of persons who have a serious mental illness also have a substance use or abuse disorder. Dual diagnosis is sometime referred to as co-occurring disorders or comorbidity.

**DUAL DIAGNOSIS: MENTAL ILLNESS AND SUBSTANCE ABUSE**

Substance Use Disorders Substance use disorders — the repeated misuse of alcohol and/or drugs — often occur simultaneously in individuals with mental illness, usually to cope with overwhelming symptoms. The combination of these two illnesses has its own term: dual diagnosis, or co-occurring disorders.

**Substance Use Disorders | NAMI: National Alliance on**

Dual Diagnosis is a term used to describe cases in which a person has problems with drug or alcohol abuse in addition to a separate diagnosis of mental illness such as anxiety, depression, or PTSD. Studies have shown that up to half of patients with mood disorders use drugs or alcohol to cope with symptoms of their illnesses.

**Dual Diagnosis: Addiction and Mood -- Addiction Resource**

If you are struggling with bipolar disorder and with a drug or alcohol problem, you may have a Dual Diagnosis of bipolar disorder and substance abuse. Having a Dual Diagnosis, or a co-occurring disorder, can make recovery more challenging. Bipolar individuals may experience periods of intense depression alternating with episodes of heightened activity and an exaggerated sense of self-importance.
