When developing more complex models it is often desirable to report a p-value for the model as a whole as well as an R-square for the model..
p-values for models.

The p-value for a model determines the significance of the model compared with a null model. For a linear

In R, you add lines to a plot in a very similar way to adding points, except that you use the `lines()` function to achieve this. But first, use a bit of R magic to create a trend line through the data, called a regression model. You use the `lm()` function to
