Using authentic data to make math meaningful to students, Jay Lehmann's algebra series uses a curve-fitting approach to model compelling, real-world situations, while answering the perennial question "But what is this good for?" Beginning with interesting data sets, students are asked to find models and derive equations to fit a scenario, helping them to understand functions graphically, numerically, and symbolically. Updated exercises, labs, and graphs deepen students' understanding of core concepts and keeps them motivated to learn. Empower your Students for Success! George Woodbury's Algebra Series empowers students for future success in college-level math courses through its early-and-often approach to functions and graphing, integrated study strategies, and quality exercise sets that encourage true conceptual understanding. The early-and-often approach to functions helps students prepare for future math courses. A Study Skill Strategy is introduced in each chapter opener and then expanded upon throughout the chapter in the Building Your Study Strategy boxes that appear before each exercise set. Students can further develop their study skills with the Study Skills Workbook, written by Alan Bass, to accompany the Woodbury texts. Vocabulary Exercises begin each section of exercises and check student understanding of the basic vocabulary presented in the preceding section.

The Rockswold/Krieger algebra series fosters conceptual understanding by using relevant applications and visualization to show students why math matters. It answers the common question "When will I ever use this?" Rockswold teaches students the math in context, rather than including the applications at the end of the presentation.
