Continuing his contribution to medieval Jewish intellectual history, Haym Soloveitchik focuses here on the radical pietist movement of Hasidei Ashkenaz and its main literary work, Sefer Hasidim, and on the writings and personality of the Provenal commentator Ravad of Posquires. In both areas Soloveitchik challenges mainstream views to provide a new understanding of medieval Jewish thought. Some of the essays are revised and updated versions of work previously published and some are entirely new, but in all of them Soloveitchik challenges reigning views to provide a new understanding of medieval Jewish thought. The section on Sefer Hasidim brings together over half a century of Soloveitchik's writings on German Pietism, many of which originally appeared in obscure publications, and adds two new essays. The first of these is a methodological study of how to read this challenging work and an exposition of what constitutes a valid historical inference, while the second reviews the validity of the sociological and anthropological inferences presented in contemporary historiography. In discussing Ravad's oeuvre, Soloveitchik questions the widespread notion that Ravad's chief accomplishment was his commentary on Maimonides' Mishneh torah; his Talmud commentary, he claims, was of far greater importance and was his true masterpiece. He also adds a new study that focuses on the acrimony between Ravad, as the low-born genius of Posquires, and R. Zerahyah ha-Levi of Lunel, who belonged to the Jewish aristocracy of Languedoc, and considers the implications of that relationship.

Well-known critic and novelist Brian Stableford here discusses the writers, editors, and publishers who helped create the modern genre of science fiction: Mary Wollstonecraft Shelley, Edgar Allan Poe, Camille Flammarion, Jules Verne, H. G. Wells, Hugo Gernsback, John W. Campbell Jr., Edward E. "Doc" Smith, Robert A. Heinlein, James Blish, Gregory Benford, and Ian Watson. Complete with bibliography and index.

The great eighteenth-century French thinker Denis Diderot (1713–84) once compared himself to a weathervane, by which he meant that his mind was in constant motion. In an extraordinarily diverse career he produced novels, plays, art criticism, works of philosophy and poetics, and also reflected on music and opera. Perhaps most famously, he ensured the publication of the Encyclopédie, which has often been credited with hastening the onset of the French Revolution. Known as one of the three greatest philosophes of the Enlightenment, Diderot rejected the Christian ideas in which he had been raised. Instead, he became an atheist and a determinist. His radical questioning of received ideas and established religion led to a brief imprisonment, and for that reason, no doubt, some of his subsequent works were written for posterity. This collection of essays celebrates the life and work of this extraordinary figure as we approach the tercentenary of his birth.

This groundbreaking new source of international scope defines the essay as nonfictional prose texts of between one and 50 pages in length. The more than 500 entries by 275 contributors include entries on nationalities, various categories of essays such as generic (such as sermons, aphorisms), individual major works, notable writers, and periodicals that created a market for essays, and particularly famous or significant essays. The preface details the historical development of the essay, and the alphabetically arranged entries usually include biographical sketch, nationality, era, selected writings list, additional readings, and anthologies

By piecing the lives of selected individuals into a grand mosaic, Pulitzer Prize-winning historian Daniel J. Boorstin explores the development of artistic innovation over 3,000 years. A hugely ambitious chronicle of the arts that Boorstin delivers with the scope that made his Discoverers a national bestseller. Even as he tells the stories of such individual creators as Homer, Joyce, Giotto, Picasso, Handel, Wagner, and Virginia Woolf, Boorstin assembles them into a grand mosaic of aesthetic and intellectual invention. In the process he tells us not only how great art (and great architecture and philosophy) is created, but where it comes from and how it has shaped and mirrored societies from Vedic India to the twentieth-century United States.

?The book records the essential discoveries of mathematical and computational scientists in chronological order, following the birth of ideas on the basis of prior ideas ad infinitum. The authors document the winding path of mathematical scholarship throughout history, and most importantly, the thought process of each individual that resulted in the mastery of their subject. The book implicitly addresses the nature and character of every scientist as one tries to understand their visible actions in both adverse and congenial environments. The authors hope that this will enable the reader to understand their mode of thinking, and perhaps even to emulate their virtues in life.

Cinema has been long associated with France, dating back to 1895, when Louis and Auguste Lumi_re screened their works, the first public viewing of films anywhere. Early silent pioneers Georges MZli_s, Alice Guy BlachZ and others followed in the footsteps of the Lumi_re brothers and the tradition of important filmmaking continued throughout the 20th century and beyond. In Encyclopedia of French Film Directors, Philippe Rège identifies every French director who has made at least one feature film since 1895. From undisputed masters to obscure one-timers, nearly 3,000 directors are cited here, including at least 200 filmmakers not mentioned in similar books published in France. Each director's entry contains a brief biographical summary, including dates and places of birth and death; information on the individual's education and professional training; and other pertinent details, such as real names (when the filmmaker uses a pseudonym). The entries also provide complete filmographies, including credits for feature films, shorts, documentaries, and television work. Some of the most important names in the history of film can be found in this encyclopedia, from masters of the Golden Age_Jean Renoir and RenZ Clair_to French New Wave artists such as Fran_ois Truffaut and Jean-Luc Godard.
