This fifth volume in our book series on Research in Management Education and Development (Information Age Publishing) is devoted toward an empirical and conceptual examination of some long-standing criticisms of graduate management education. This volume also showcases a wide variety of innovative experiments in new visions of Master's level graduate management education. We draw upon a rich array of USA and non-USA scholars and empirical sources in this volume and we are most grateful to our volume's distinguished academic contributors for sustaining our book series aspiration to both reflect upon and shape innovative thinking and practice on important issues of management education and development. The over-arching theme in each chapter is the need for each innovation to be integrated within the larger body of curriculum, program structures and pedagogic practices of the innovative Business School and its overall management education curriculum. Piecemeal and stand-alone versions of each innovation are seen more as pilots for early stage demonstration of the value of the innovation. Each chapter argues for a more holistic approach to embedding each innovation within the fabric of the entire business school and graduate management education enterprise. This call for holistic, integrative approaches to graduate management education is amply demonstrated in many chapters of this volume and we sincerely hope that you will find some inspiration in the forthcoming pages for furthering your own educational vision.

While there is consensus that institutions need to represent their educational effectiveness through documentation of student learning, the higher education community is divided between those who support national standardized tests to compare institutions' educational effectiveness, and those who believe that valid assessment of student achievement is based on assessing the work that students produce along and at the end of their educational journeys. This book espouses the latter philosophy--what Peggy Maki sees as an integrated and authentic approach to providing evidence of student learning based on the work that students produce along the chronology of their learning. She believes that assessment needs to be humanized, as opposed to standardized, to take into account the demographics of institutions, as students do not all start at the same place in their learning. Students also need the tools to assess their own progress. In addition to updating and expanding the contents of her first edition to reflect changes in assessment practices and developments over the last seven years, such as the development of technology-enabled assessment methods and the national need for institutions to demonstrate that they are using results to improve student learning, Maki focuses on ways to deepen program and institution-level assessment within the context of collective inquiry about student learning. Recognizing that assessment is not initially a linear start-up process or even necessarily sequential, and recognizing that institutions develop processes appropriate for their mission and culture, this book does not take a prescriptive or formulaic approach to building this commitment. What it does present is a framework, with examples of processes and strategies, to assist faculty, staff, administrators, and campus leaders to develop a sustainable and shared core institutional process that deepens inquiry into what and how students learn to identify and improve patterns of weakness that inhibit learning. This book is designed to assist colleges and universities build a sustainable commitment to assessing student learning at both the institution and program levels. It provides the tools for collective inquiry among faculty, staff, administrators and students to develop evidence of students' abilities to integrate, apply and transfer learning, as well as to construct their own meaning. Each chapter also concludes with (1) an Additional Resources section that includes references to meta-sites with further resources, so users can pursue particular issues in greater depth and detail and (2) worksheets, guides, and exercises designed to build collaborative ownership of assessment. The second edition now covers: • Strategies to connect students to an institution's or a program's assessment commitment • Description of the components of a comprehensive institutional commitment that engages the institution, educators, and students--all as learners • Expanded coverage of direct and indirect assessment methods, including technology-enabled methods that engage students in the process • New case studies and campus examples covering undergraduate, graduate education, and the co-curriculum • New chapter with case studies that presents a framework for a backward designed problem-based assessment process, anchored in answering open-ended research or study questions that lead to improving pedagogy and educational practices • Integration of developments across professional, scholarly, and accrediting bodies, and disciplinary organizations • Descriptions and illustrations of assessment management systems • Additional examples, exercises, guides and worksheets that align with new content

"The Handbook is designed for scholars and psychology professionals interested in intelligence, cognitive abilities, educational testing and measurement, reasoning, and problem solving. It can also be used by advanced undergraduate and graduate students studying intelligence or the psychology of individual differences. In addition, the Handbook will be a welcome addition to any academic library."--BOOK JACKET.

Text Completion & Sentence Equivalence GRE Strategy Guide provides a comprehensive approach to the vocabulary-based questions on the GRE. Learn core principles and useful techniques for taking cues from the given sentence, anticipating correct answers, and eliminating wrong answers. Delving deeply into both of the GRE's vocabulary question types, this Guide provides straightforward step-by-step processes, detailed examples, and built-in exercises to hone particular skills. It is designed to ensure that, not only do you know the vocabulary being tested, but you can also use those words in context with ease and efficiency.
