This is a follow-up and companion to the successful How to Build a Flathead Ford V-8. This new edition describes the build-up of a 1946-1948 model 59 engine with a 4-barrel carburetor, a blown French flathead engine, and a blown Ardun engine-designed for street use. Many French flathead engines have been purchased by flathead lovers in the United States. There is a strong demand for those engine blocks, and the purchasers are desperate for any build-up information. The popularity of the Ardun is amazing, and this second volume contains a load of new information about the Ardun, as well as information and photographs of the latest flathead goodies, such as crankshafts, connecting rods, intake manifolds, and cylinder heads.

The ultimate Ford flathead resource for hot rodders and restorers. The last commercially produced Ford Flathead V-8 was cast over 60 years ago. Simple by today's high-tech standards, during its performance reign from the late '30s through the mid '50s, the flathead was unsurpassed for go-fast power on the cheap. It spawned the modern aftermarket speed-equipment industry and became a favorite of bootleggers, dry-lakes racers, dirt trackers, street racers, and a whole generation that just wanted fast cars. Whether you're restoring a classic Ford, building a traditional hot rod, or creating a period custom car, you'll want to get the most out of its vintage flathead V-8. In How to Rebuild & Modify Ford Flathead V-8 Engines, authors Mike Bishop and Vern Tardel, two of the most highly-regarded experts in hot rodding, give you the detailed and accurate information you need to build, restore, or just daydream about the engine that gave birth to hot rodding. Every aspect of buying, building, and owning a flathead V-8 engine is extensively covered. Go through the basics of selecting the right engine for the right project, building and rehabilitating engines, and final tuning. Diagrams and color photos bring these legendary engines to life for the hands-on hobbyist, collector, and aficionado. Keep it mild or build it wild, but either way, How to Rebuild & Modify Ford Flathead V-8 Engines will help ensure your flathead is delivering the power you need.

From cultural studies, sociology, media studies, gender studies and elsewhere there have been a spate of books recently which have attempted to characterize the state of modernity. Many of these have also argued that what is required is an ethnographic work to determine how far these supposed trends actually apply to a given population. This book explicitly accepts this challenge and, in so doing, demonstrates the potential of modern anthropology studies. It starts by summarizing some debates on modernity and then argues that the Caribbean island of Trinidad is particularly apt for such a study given the origins of its population in slavery and indentured labour, both forms of extreme social rupture. The particular focus of this book is on mass consumption and the way goods and imported images such as soap opera have been used to express and develop a number of key contradictions of modernity. It will be of interest to anthropologists looking for a new potential for the discipline, as well as students in other fields who will be interested in the new contribution of anthropology to their debates.
