Goal Attainment Scaling was developed by Dr Tom Kiresuk (in Minnesota USA) as a useful (participative) measurement technique for evaluation of the outcomes of mental health de-institutionalization programs of the 1960s and 1970s.

WORKSHOP: Goal Attainment Scaling: An evaluation tool to ...

This manual consists of three parts: (1) an introduction to Goal Attainment Scaling (GAS) as an evaluation tool in rehabilitation, (2) a workbook, and (3) a report of a pilot study of GAS. Chapter 1 discusses GAS as an evaluation procedure and defines it as a way of arranging and expressing time-based treatment or service goals so that results can be seen and measured.

ERIC - ED187880 - Goal Attainment Scaling Manual, RUL #5 ...

Each goal is rated on a 5-point scale, with the degree of attainment captured for each goal area: If the patient achieves the expected level, this is scored at 0. If they achieve a better than expected outcome this is scored at: +1 (more than expected) +2 (much more than expected) If they achieve a worse than expected outcome this is scored at:

King's College London - GAS - Goal Attainment Scaling in ...

Scoring: Each goal is rated on a 5-point scale: +2 = much more than expected. +1 = somewhat more than expected. 0 = Patient achieves the expected level. -1 = somewhat less than expected. -2 = much less than expected. Overall score is calculated by incorporating the goal outcome scores into a single aggregated t-score.

Goal Attainment Scale | RehabMeasures Database

Goal Attainment Scaling (GAS) is an option that can be used as a means of measuring outcome data from different contexts set out on a 5 point scale of -2 to +2. It enables the data to be placed on a quantitative measurement scale thus tackling the problem of how to adequately identify and measure qualitative goal impact and attainment.
