The purpose of the insulator or insulation is to insulate the electrically charged part of any equipment or machine from another charged part or uncharged metal part. At lower utilization voltage the insulation also completely covers the live conductor and acts as a barrier and keeps the live conductors unreachable from human being or animals.

High voltage - Wikipedia transformers to step up the voltage, causing a proportional reduction in current. The use of higher voltages therefore permitted the construction of longer lines to supply power to remote areas. The use of the higher voltages, however, uncovered the problems associated with high voltage insulation. The effects of the environment such as
