Inhaltsangabe:Einleitung: Die konventionelle, handgeführte Dokumentation im medizinischen Bereich stößt mit der ständig zunehmenden Menge an Informationen, die dokumentiert werden müssen, an ihre Grenzen. Deshalb werden stufenweise computergestützte Systeme für die Dokumentation in allen Bereichen eines Krankenhauses eingeführt. Die schrittweise Digitalisierung im Krankenhaus führt oft zu Medienbrüchen, die es sukzessive abzubauen gilt. An einem Unfallkrankenhaus in Linz, Österreich, soll ein Intensiv- und Anästhesiedokumentationssystem für die Unterstützung der Dokumentation auf der Intensivstation und im Operationsbereich von Grund auf eingeführt und installiert werden. Dieses Krankenhaus ist bereits mit anderen medizinischen Informationssystemen ausgestattet, die es bei der Integration zu berücksichtigen gilt. Eine extra formierte Projektgruppe, bestehend aus Pflegekräften und Ärzten des Unfallkrankenhauses, hat sich für das Intensiv- und Anästhesiedokumentationssystem COPRA der Firma COPRA-System GmbH entschieden. Den Vertrieb und die Installation des Systems übernimmt die medipart GmbH. Die medipart GmbH hat die Aufgabe, den Aufbau des Intensiv- und Anästhesiedokumentationssystem von der Beschaffung der Hardware bis zur Realisierung der Datenübermittlung zwischen den vorhandenen medizinischen Informationssystemen und der Medizintechnik zu realisieren. Diese Arbeit beschäftigt sich mit der Integration des gewählten Intensiv- und Anästhesiedokumentationssystems COPRA am Unfallkrankenhaus Linz. Die Aufgabe umfasst die Analyse der Situation, in der das System integriert werden soll, bis hin zur praktischen Umsetzung und Test der Integration. Das Ziel besteht darin, geeignete Kommunikationsverbindungen für den Datenaustausch mit den vorhandenen Informationssystemen zu empfehlen und zu realisieren. Des Weiteren sollen die Daten verschiedener medizintechnischer Systeme automatisch im neuen System dokumentiert werden. Für diese automatische Dokumentation gilt es die möglichen Anbindungswege zu bestimmen und umzusetzen. Der Test der Integration bildet den Abschluss der Arbeit. The computing world today is in the middle of a revolution: mobile clients and cloud computing have emerged as the dominant paradigms driving programming and hardware innovation today. The Fifth Edition of Computer Architecture focuses on this dramatic shift, exploring the ways in which software and technology in the cloud are accessed by cell phones, tablets, laptops, and other mobile computing devices. Each chapter includes two real-world examples, one mobile and one datacenter, to illustrate this revolutionary change. Updated to cover the mobile computing revolution Emphasizes the two most important topics in architecture today: memory hierarchy and parallelism in all its forms. Develops common themes throughout each chapter: power, performance, cost, dependability, protection, programming models, and emerging trends ("What's Next") Includes three review appendices in the printed text. Additional reference appendices are available online. Includes updated Case Studies and completely new exercises.

This study guide helps you prepare for the HPE ATP Server Solutions V4 certification exam (HPE0-S52). Organized along the lines of exam topics and objectives, chapters can be studied independently when preparing for certification. If you already hold the HPE ATP Server Solutions V3 certification and want to acquire the HPE ATP Server Solutions V4 certification, this guide also covers the topics in the Building HPE Server Solutions delta exam (HPE0-S53).

This book describes warehouse-scale computers (WSCs), the computing platforms that power cloud computing and all the great web services we use every day. It discusses how these new systems treat the datacenter itself as one massive computer designed at warehouse scale, with hardware and software working in concert to deliver good levels of internet service performance. The book details the architecture of WSCs and covers the main factors influencing their design, operation, and cost structure, and the characteristics of their software base. Each chapter contains multiple real-world examples, including detailed case studies and previously unpublished details of the infrastructure used to power Google's online services. Targeted at the architects and programmers of today's WSCs, this book provides a great foundation for those looking to innovate in this fascinating and important area, but the material will also be broadly interesting to those who just want to understand the infrastructure powering the internet. The third edition reflects four years of advancements since the previous edition and nearly doubles the number of pictures and figures. New topics range from additional workloads like video streaming, machine learning, and public cloud to specialized silicon accelerators, storage and network building blocks, and a revised discussion of data center power and cooling, and uptime. Further discussions of emerging trends and opportunities ensure that this revised edition will remain an essential resource for educators and professionals working on the next generation of WSCs.
