Hungry Planet by Peter Menzel - Goodreads

Hungry Planet: What the World Eats Similar in style to Material World, Hungry Planet presents what 30 families eat in a week through a combination of photographs and essays. Each family's profile includes descriptions about their food purchases in USD and a portrait of the family surrounded by a week's worth of groceries.

Provides an overview of what families around the world eat by featuring portraits of thirty families from twenty-four countries with a week's supply of food.

"A photographic collection exploring what the world eats featuring portraits of twenty-five families from twenty-one countries surrounded by a week's worth of food"--Provided by publisher.

Photographs show the homes and possessions of average families in thirty countries around the world and document each family's lifestyle

Earth will have more than 9.6 billion people by 2050 according to U.N. predictions. With resources already scarce, how will we feed them all? Journalist Lisa Palmer has traveled the world for years documenting the cutting-edge innovations of people and organizations on the front lines of fighting the food gap. Here, she shares the story of the epic journey to solve the imperfect relationship between two of our planet's greatest challenges: climate change and global hunger. Hot, Hungry Planet focuses on three key concepts that support food security and resilience in a changing world: social, educational, and agricultural advances; land use and technical actions by farmers; and policy nudges that have the greatest potential for reducing adverse environmental impacts of agriculture while providing more food. Palmer breaks down this difficult subject though seven concise and easily-digestible case studies over the globe and presents the stories of individuals in six key regions/India, sub-Saharan Africa, the United States, Latin America, the Middle East, and Indonesia/painting a hopeful picture of both the world we want to live in and the great leaps it will take to get there.

"Explores where the food we eat comes from and what the future of farming look like"--

"This book presents 80 people around the world and what they ate on one ordinary day. It is organized according to the number of calories consumed, from least to most."

Originally published in 1999. The theme running through this collection of essays is that food quality and human health, the welfare of animals and the methods of farming, and the quality of the environment, go hand-in-hand. This theme continues along the lines that the present system is harmful to them all and to our ability to generate enough good food for the whole world. The contributors to the volume offer alternatives - for more humane and moderate methods of farming which produce enough nourishing food without damaging the environment it depends on.

Photographs, first-person chronicles, and statistics reflect the status of women around the world, offering a portrait of the lives, feelings, and beliefs of women from many cultures

How we can transform the global food system by changing what's on our dinner plates The implausible truth: Over one billion people in the world are hungry and over one billion are overweight. Far from complete opposites, hunger and obesity are in fact different manifestations of the same problem: It's increasingly difficult to find and eat nutritious food. By examining the global industrial food system using the deceptively simple template of a classic American dinner, We the Eaters not only outlines the root causes for this bizarre and troubling dichotomy, but also provides a blueprint of actionable solutions/solutions that could start with changing out just a single item on your plate. From your burger to your soda, Gustafson unpacks how even the hyper-local can cause worldwide ripples. For instance: American agricultural policy promoting corn and soybeans in beef farming means we feed more to cows than to hungry people. This is compounded by the environmental cost of factory livestock farming, rising obesity rates, and the false economics of unhealthy high meat consumption. The answer? Eat a hamburger; just make it a smaller, sustainably raised, grass-fed one. Gustafson/a young entrepreneur, foreign policy expert, and food policy advocate/delivers a wake-up call that will inspire even the most passive reader to take action. We can love our food and our country while being better stewards of our system and our health. We the Eaters is nothing short of a manifesto: If we change dinner, we can change the world.
