Clock PMS Demo Hotel Web Reservation System.

Hotel-Spider was recommended to us during the assessment of our software. Even though the configuration took a little more time at the beginning, the change has certainly been worth our while. We now save a lot of time since we are interfaced to our own Property Management System. This saves us from entering reservations manually.

- Thameem Razick, Hotel Manager, Rose Garden Hotel Apartments, Al Barsha UAE . *WINHMS is an excellant PMS with reliable support & service. We are using the product for the last five years and are very satisfied with it.

A comprehensive and wide-ranging introduction to operational hotel management, this textbook brings together business administration, management and entrepreneurship into a complete overview of the discipline. Essential reading for students of hospitality management, the book also benefits from online support materials including student tests, a glossary and PowerPoint slides.

This Second Edition has been updated to include a brand new chapter on yield management, plus a human resources chapter refocused to cover current trends in training, employee empowerment, and reducing turnover. In addition, you'll discover how to increase efficiency with today's hospitality technology--from electronic lock to front office equipment.

Ziel des Lehrbuches ist es, einen umfassenden Einblick in das gesamte Spektrum elektronischer Informations-, Kommunikations- und Reservierungssysteme im Tourismus zu geben. Das Lehrbuch umfasst die Inhalte der Vorlesungen mit Übungen an Hochschulen aller Ebenen.

Das Buch vermittelt die Tourismus- und Reisewirtschaft als eine globale Branche der angewandten Wirtschaftsinformatik. Sie erfordert multimediale Informations- und Kommunikationssysteme, Management-, Vertriebs- und Verarbeitungssysteme im Rahmen IT-basierter Prozesse. Fachleute der Angewandten Informatik sollen die Strukturen und Anforderungen verstehen, um innovative Systeme entwickeln und bereitstellen zu können. Fachleute des Tourismus- und Reisemanagements sollen innovative informationstechnologische Entwicklungen beurteilen sowie IT-Investitionen entscheiden können, um sie erfolgreich und resilient einzusetzen. Neben der umfassenden Aktualisierung erhalten die Mobilitätswende, der Online-Handel, die Vernetzung in Sozialen Medien, Big Data, Künstliche Intelligenz, Mixed Reality u.a.m in dieser dritten Auflage einen erweiterten Fokus. Das Buch untersttzt die Lehre und Forschung sowie die Unternehmenspraxis.

Distributed systems intertwine with our everyday lives. The benefits and current shortcomings of the underpinning technologies are experienced by a wide range of people and their smart devices. With the rise of large-scale IoT and similar distributed systems, cloud bursting technologies, and partial outsourcing solutions, private entities are encouraged to increase their efficiency and offer unparalleled availability and reliability to their users. The Research Anthology on Architectures, Frameworks, and Integration Strategies for Distributed and Cloud Computing is a vital reference source that provides valuable insight into current and emergent research occurring within the field of distributed computing. It also presents architectures and service frameworks to achieve highly integrated distributed systems and solutions to integration and efficient management challenges faced by current and future distributed systems. Highlighting a range of topics such as data sharing, wireless sensor networks, and scalability, this multi-volume book is ideally designed for system administrators, integrators, designers, developers, researchers, academicians, and students.

This book very specifically focuses on technology application in tourism in Asia. The book contains twenty-seven chapters in four sections (i.e., theories, innovations, practices, and future research directions), based on the intriguing qualities and importance of technology applications in the Asian tourism business. This book, a blend of comprehensive and extensive efforts by the contributors and editor, is designed to extensively cover technology applications in tourism in Asia, including distinct topics such as mobile computing, new product designs, innovative technology usages in tourism promotion, technology-driven sustainable tourism development, location-based apps, mobility, accessibility, the post crisis situation of COVID-19, etc. This book is a significant contribution towards the very limited knowledge of technology applications in tourism, with selected examples of Asian countries. The importance of technology in Asian tourism is rapidly increasing, and has led to a rise in luxury, allowing citizens to enjoy leisure travel over both long and short distances. The rise of low-cost airlines and the region's growing, affluent middle class have changed the tourism environment dramatically. More tourists are booking their holidays online as a result of technological advancements. Online travel is the most important and well-established aspect of Asia's Internet economy. Considering the ongoing trend of technology applications in the tourism industry in Asia, more research attempts like this book need to be made aiming towards exploring diverse aspects. As tourism is an expanding area, this book can serve as a reading companion for tourism students, policy planners and industry professionals. This book is expected to be appreciated by expatriate researchers and researchers having a keen interest in the Asian tourism industry.
