Terms in this set (47) immune system. internal defense system consisting of organic molecules and cells that protect the body by altering physiology and destroying pathogens; innate and adaptive divisions.

Immune System - Study Guide

Flashcards | Quizlet

Antigens trigger the immune system to react against the cells that carry them. T cells mature in bone marrow, and B cells mature in the thymus. B cells must be activated by an antigen before they can fight pathogens. The cell-mediated immune response leads to the destruction of cells that are infected with viruses.
