A behind-the-scenes exposure why our electricity system is headed for a state of emergency-and what can be done to head it off Most people don't realize that skyrocketing global energy demand and economic growth severely affect the supply of electricity. Between production (power plants) and delivery is an antiquated, "third-world" transmission grid that is in desperate need of hardening against breakdowns, terrorist attacks, inadequate carrying capacity, and operational obsolescence. And while electricity doesn't hold the headlines or dramatic power of oil, the ability to ensure its uninterrupted supply at a reasonable price is even more essential to global survival and prosperity. Lights Out is today's most detailed, in-depth examination of this largely unreported looming energy crisis. Written by one of the world's top electricity industry experts, this powerful book covers numerous hot button economic and political issues-free markets versus regulation; energy independence versus foreign imports; nuclear power, global warming, and other environmental issues; and much more. Beyond just

uncovering and illuminating the problems, however, it proposes a comprehensive road map of technical solutions and regulatory reform from both the production and demand sides of the equation—a framework for rethinking, rebuilding, and enhancing the entire electricity production and delivery infrastructure. Prescriptive and provocative, *Lights Out* will redefine the simmering debate on how the world can—and must—act now to head off a global catastrophe, one that could eventually wreak even more havoc than the ongoing oil crisis. Jason Makansi is the President of Pearl Street, Inc., a consulting firm; Principal of PS Liquidity Advisors, an advisory service for energy technology companies raising capital; and Executive Director of the Energy Storage Council, a public-policy advocacy organization. A prolific author, respected industry thought leader, and seasoned communicator, Mr. Makansi has been analyzing the technological, business, and regulatory issues in electricity production and delivery for over twenty-five years. He earned a BS in chemical engineering from Columbia University. His earlier books include *An Investor's Guide to the Electricity Economy*, also published by John Wiley & Sons, and *Managing Steam: An Engineering Guide to Commercial, Industrial, and Utility Systems*.

Any electrician likely to need ready answers on the job, and who doesn't - needs Rex Miller's *Electrician's Pocket Manual*. This toolbox-sized time-and-trouble saver makes short shrift of all those questions that pop up during your day's work, whether they relate to tools of the trade...standard electrical procedures...working with fiber optics and installing the newest communications equipment...basic math and measurement, including conversion...reading blueprints. It's also loaded with 100 tables and charts, 100 formulas and 300 diagrams. You get safety rules, definitions and abbreviations of electrical units of measurement, and symbols for electrical construction drawings, including the new symbols for electrical drafting now being used in CAD drafting. Abstract: The aim of this project is to do the plant layout and the installation of an industry dedicated to make sweets. The building will be located in Sant Climent de Llobregat (town near Barcelona). The total area of the project is about 230 m² and it is a part of the grand floor of the building where the promotor lives. The industry is going to produce sweets of four different flavors, although in the long term we may add new ones. The industry will be small and hand-made; also, we'll give our best effort so our candies will have the best quality. As this project doesn't have any backup, calculations will be necessary: installation of electrical wiring, a fire escape and a fire extinguisher, calculation of machinery and spaces distribution. Maps have also been made to be able to create this project. The budget is around 88.000 euros, it includes the machineries and the construction works. If the project carries on, a loan will be needed. The payback period, with the set conditions, is 15 years. The time is height but the factory gives a changes and employment to the people in town and the hand-made it is an enterprising idea.
