Stop paying for software. A world full of high-quality software is out there that you don't have to spend a dime for. If you've just spent your entire computing budget on a PC only to find that you need software to do anything interesting, this is the book that will show you how to get what you need without wreaking havoc on your finances. Install the right software to make a great work computer for no extra cost. Packed with the practical, hands-on guidance and technical know-how that you've come to expect from Apress, *Don't Spend A Dime: The Path to Low-Cost Computing* takes you on a tour of the very best zero-cost software in each of the many categories that matter to the typical PC user. Learn to edit photos on the Internet without having to install any software at all. Find out where to get a free office suite for word processing and spreadsheet work. Whatever your need, James Kelly, best-selling technology author, guides you through the exciting and often confusing world of zero-cost computing. This book Tells you what you need to install to have a fantastic work computer without spending a dime Saves you money by showing you how to meet your computing needs Saves you time by pointing you directly to the best free software Saves you work by illustrating the most commonly performed tasks with each zero-cost software Gives you choices and the ability to make your own decisions for your own needs and requirements Before you go buy that \$400.00 office suite—or worse, before you “borrow” it from work—stop! Let this book show you how to save hundreds of dollars in expensive software. Learn all about the free tools that the digerati use to make their lives better, and stop paying out the nose for software. Don't spend a dime!

Succeed with style! Hair salons and day spas across the country are making as much as

\$300,000 a year - and you can, too. Whether you want to start a small salon out of your home or open a full-service day spa, this guide will show you exactly how to succeed. You don't even have to be a stylist. If you've got strong business skills, you can open a salon/spa, rent space to stylists, message therapists and nail artists, then sit back and rack in the cash. It was an honor and a pleasure to organize the 13th International Conference on Computer Analysis of Images and Patterns (CAIP 2009) in Mu nster, Germany. CAIP has been held biennially since 1985: Berlin (1985), Wismar (1987), Leipzig (1989), Dresden (1991), Budapest (1993), Prague (1995), Kiel (1997), Ljubljana (1999), Warsaw (2001), Groningen (2003), Paris

(2005), and Vienna (2007). Initially, this conference series served as a forum for getting together scientists from East and West Europe. Nowadays, CAIP enjoys a high international visibility and attracts participants from all over the world. For CAIP 2009 we received a record number of 405 submissions. All papers were reviewed by two, and in most cases, three reviewers. Finally, 148 papers were selected for presentation at the conference, resulting in an acceptance rate of 36%. All Program Committee members and additional reviewers listed here deserve a great thanks for their timely and competent reviews. The accepted papers were presented either as oral presentations or posters in a single-track program. In addition, we were very happy to have Aljoscha Smolic and David G.

Stork as our invited speaker to present their work in two fascinating areas. With this scientific program we hope to continue the tradition of CAIP in providing a forum for scientific exchange at a high quality level. A successful conference like CAIP 2009 would not be possible without the support of many institutions and people. First of all, we like to thank all the authors of submitted papers and the invited speakers for their contributions. The Steering Committee members were always there when advice was needed.

This book describes a range of new biometric technologies, such as high-resolution fingerprint, finger-knuckle-print, multi-spectral backhand, 3D fingerprint, tongueprint, 3D ear, and multi-spectral iris technologies. Further, it introduces readers to efficient feature extraction, matching and fusion algorithms, in addition to developing potential systems of its own. These advanced biometric technologies and methods are divided as follows: 1. High-Resolution Fingerprint Recognition; 2. Finger-Knuckle-Print Verification; 3. Other Hand-Based Biometrics; and 4. New Head-Based Biometrics. Traditional biometric technologies, such as fingerprint, face, iris, and palmprint, have been extensively studied and addressed in many research books. However, all of these technologies have their own advantages and disadvantages, and there is no single type of biometric technology that can be used for all applications. Many new biometric technologies have been developed in recent years, especially in response to new applications. The contributions gathered here focus on how to develop a new biometric technology based on the requirements of essential applications, and how to design efficient algorithms that yield better performance.

In this special issue, the most recent advances in the domain of numerical cognition will be presented. During the last decades, our understanding of how numbers are processed increased dramatically with the arrival of different imaging techniques and neurophysiological experiments in humans and monkeys. We are now starting to build up a clearer picture of how numbers are represented in the brain, how this representation develops in the course of a lifetime, how numbers are embedded in other cognitive features like attention, spatial memory, etc., and how this eventually leads to our capability to perform complex mathematics. Ultimately, this accumulation of knowledge might provide us with an understanding of why numbers are problematic for some people. This special issue deals with all aspects of numerical cognition: findings on the basic neural responses to magnitudes, the link between numbers, space, time, attention, action, etc., mathematical processing, numerical development, in healthy and clinical populations. This special issue solicits contributions from the field of neurobiology, neuropsychology, and behavioral and computational neuroscience that will increase our understanding of the neural mechanisms underlying numerical cognition.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

Download File PDF Inspiron 530s User Manual

This text describes the functions that the BIOS controls and how these relate to the hardware in a PC. It covers the CMOS and chipset set-up options found in most common modern BIOSs. It also features tables listing error codes needed to troubleshoot problems caused by the BIOS.

This book constitutes the refereed proceedings of the 19th International Conference on Industrial and Engineering Applications of Artificial Intelligence and Expert Systems, IEA/AIE 2006, held in Annecy, France, June 2006. The book presents 134 revised full papers together with 3 invited contributions, organized in topical sections on multi-agent systems, decision-support, genetic algorithms, data-mining and knowledge discovery, fuzzy logic, knowledge engineering, machine learning, speech recognition, systems for real life applications, and more.

This book describes an advanced computer-based options trading system for which we can prove that it should outperform the market averages with a relatively low risk--including its analysis, design, implementation, operation and maintenance.
