Ionic bonds results from electrostatic forces that exist between ions of opposite charge.

These bonds typically involves a metal with a nonmetal; Covalent bonds result from the sharing of electrons between two atoms. The bonds typically involves one

## UNIT 3: Chemical Bonding - Unit 3 - MHS Honors Chemistry

The bond formed between any two atoms is not purely ionic. All bonding interactions have some covalent character because the electron density

**Access Free**  
**Ionic And**  
remains shared  
between the atoms.  
The degree of ionic  
versus the covalent  
character of a bond is  
determined by the  
difference in  
electronegativity  
between the  
constituent atoms.
