Yamaha YZF-R1 1998-2003

Highly original and based on unique empirical research in the fields of organization theory and organization behaviour, this work makes an invaluable contribution to the literature on bureaucracy and innovation. Focusing on a study of two major companies working with innovation and new product development Styhre's critical analysis pushes the boundaries of bureaucracy studies beyond its current entrenched position. Departing from the traditional view that bureaucratic organizations are inefficient, incapable of responding to external changes, unable to orchestrate innovative work and provide meaningful jobs for its co-workers, this empirical study underlines the merits of a functional organization, the presence of specialist and expertise groups and hierarchical structures. Analyzing the literature of bureaucracy, the new forms of post-bureaucratic organizations and drawing on the philosophy of Henri Bergson, the author offers a model of bureaucracy, capable of both apprehending its functional organization and its continuous and ongoing modifications and changes to adapt to external conditions. Innovative and compelling, this book is an excellent text for advanced students of organization and management theory and managerial strategists and decision-makers across the globe.

This handbook focuses on two sides of the lean production debate that rarely interact. On the one hand, management and industrial engineering scholars have presented a positive view of lean production as the epitome of efficiency and quality. On the other hand, sociology, industrial relations, and labor relations scholars focus on work speedups, management by stress, trade union positions, and self-exploitation in lean teams. The editors of this volume understand the merits of both views and present them accordingly, bridging the gaps among five disciplines and presenting the best of each perspective. Chapters by internationally acclaimed authors examine the positive, negative and neutral possible effects of lean, providing a global view of lean production while adjusting lean to the cultural and political contexts of different nation-states. As the first multi-lens view of lean production from academic and consultant perspectives, this volume charts a way forward in the world of work and management in our global economy.
