Offers state-of-the-art information on all the major synthetic fluids, describing established products as well as highly promising experimental fluids with commercial potential. This second edition contains chapters on polyinternalolefins, polymer esters, refrigeration lubes, polyphenyl ethers, highly refined mineral oils, automotive gear oils and industrial gear oils. The book also assesses automotive, industrial, aerospace, environmental, and commercial trends in Europe, Asia, South America, and the US.

Text and photographs introduce the history of trucks, the many varieties on the road today, and their different uses.

Almost all mechanical devices used in every industry require lubrication. Lubricant Analysis and Condition Monitoring explains the benefits of identifying, planning, implementing and using lubricant and machine condition monitoring programmes to extend the lifetimes of both

lubricants and machines, to achieve maximum productivity and profitability while reducing impacts on waste and the environment. This book: Offers a comprehensive overview of all types of tests used in lubricant condition monitoring programmes Discusses monitoring the condition of all types of components, machines, equipment and systems used in all industries Considers new and emerging machines, equipment and systems, including electric and hybrid vehicles Suggests which tests to use for each type of machine, equipment or system and, just as importantly, which tests not to use Provides practical examples of how to set up, run and manage condition monitoring programmes and how to achieve significant cost savings through planned and predictive maintenance schedules Gathering vital information that users of lubricants need in one place, this book is of practical use to mechanical, maintenance, manufacturing and marine engineers as well as metallurgists, chemists and maintenance technicians.

This indispensable book describes lubricant additives, their synthesis, chemistry, and mode of action. All important areas of application are covered, detailing which lubricants are needed for a particular application. Laboratory and field performance data for each application is provided and the design of cost-effective, environmentally friendly technologies is fully explored. This edition includes new chapters on chlorohydrocarbons, foaming chemistry and physics, antifoams for nonaqueous lubricants, hydrogenated styrene–diene viscosity modifiers, alkylated aromatics, and the impact of REACH and GHS on the lubricant industry.

China has used industrial policies to try to build large corporations that can challenge those based in more advanced countries. By the late 1990s the operational mechanism of China's large firms had seen large advances. Simultaneously, a revolution has taken place in global business systems, and China's large firms are even further behind the global leaders than when they began their reforms. The WTO will require China to operate rapidly on the 'global playing field' in competition with the world's leading corporations, and this increased gap presents a deep challenge for China's business and political leaders. Peter Nolan presents here the first in-depth case studies of China's large corporations under economic reform, combined with systematic benchmarking of these firms against the world's leading corporations. The book is an unrivalled resource of information on Chinese businesses, and also leads the reader to consider the impact of China's response to its current challenges not only on China itself, but on the wider global economy.

This book tells the story of China's emergence as a major economic power and the huge impact this will have on world business. Over the last five years Peter Nolan has conducted a major investigation into Chinese industry, its economic structure, and the opportunities for growth in the future. As one of just four world experts invited by the Chinese Government to consult on their application to join the World Trade Organisation he has worked closely with the heads of Chinese industry and with many foreign multinationals operating in China. China
