By providing full support for XML standards, Oracle XML DB supports native XML application development. Application developers are able to use XML-centric techniques to store, manage, organize, and manipulate XML content stored in the database. Oracle XML DB also supports the SQL/XML standard, which allows SQL-centric development techniques to be used to publish XML directly from relational data stored in Oracle Database 19c.

XML DB is an out-of-the-box solution for storing and retrieving XML documents within Oracle. In addition, the registration of XML schemas allows XML DB to shred the XML documents and store them as object-relational structures to improve query performance within the database. No additional software is needed for this process as all the functionality is built into the Oracle9i Release 2 kernel.

Oracle XML DB reduces memory overhead associated with DOM programming by managing XML schema-based XML documents using an internal in-memory structure called an XML Object (XOB). A XOB is much smaller than the equivalent DOM since it does not duplicate information like tag names and node types, that can easily be obtained from the associated XML schema.
