*Design pattern - Wikipedia*

The factory method pattern is a creational design pattern which does exactly as it sounds: it's a class that acts as a factory of object instances.. The main goal of this pattern is to encapsulate the creational procedure that may span different classes into one single function. By providing the correct context to the factory method, it will be able to return the correct object.

pattern is a general, reusable solution to a commonly occurring problem within a given context in software design. It is not a finished design that can be transformed directly into source or machine code. Rather, it is a description or template for how to solve a problem that can be used in many different situations.
