When you mention Arduino radio, you always think of modern FM radio (88-108 MHz in Europe). The LW, MW and SW band cover the range from 0.2 to 30 MHz. SW is especially interesting. Radio waves in the shortwave band can be reflected or refracted from a layer of electrically charged atoms in the atmosphere called the ionosphere.

Ettus Research, the folks behind what has come to be regarded as the granddaddy of affordable wideband SDR hardware platforms: the USRP, have put together a video tutorial in which they demonstrate how you can create an FM receiver application in under 10 minutes. This is based on using GNU Radio and its excellent graphical tool, GNU Radio Companion (GRC).

Combine the Si4844-A10 analog-tuned radio receiver with an Arduino to make a full-featured multiband radio. The idea of a single chip radio is intriguing. The prospect is especially interesting to me because, frankly, I envy the analog skills I associate with building a radio receiver.
