Chapter 1 Section 4: Sea Floor Spreading Flashcards | Quizlet

To map the ocean floor we need to know the depth at a number of places. The process of measuring the depths is known as bathymetry. These measurements were first made through soundings, where a weighted line (lead line) was let out by hand until it touched the bottom, and the depth could be recorded from the length of the line (Figure 1.4.1). This technique led to the fathom as a unit of depth; as sailors hauled in the sounding line they would stretch it out to cover their arm span.

1.4 Mapping the Seafloor – Introduction to Oceanography

Notes 1-4 - Sea-Floor Spreading This section explains sea-floor spreading and describes evidence that it happens. The section also explains subduction and describes how subduction affects Earth's oceans. Use Target Reading Skills As you read about sea-floor spreading, fill in the flowchart to show the sequence of events. Mid-Ocean Ridges 1.

Sea-Floor Spreading Answer Key. This is a mid-ocean ridge. It is an underwater mountain range that forms when magma pushes up on the crust at a divergent boundary. Seafloor spreading is happening at B. Molten rock pushes up from the asthenosphere and pushes the plates apart at the mid-ocean ridge. This creates new ocean crust.

Sea-Floor Spreading Answer Key - Google Docs

This graphic shows several ocean floor features on a scale from 0-35,000 feet below sea level. The following features are shown at example depths to scale, though each feature has a considerable range at which it may occur: continental shelf (300 feet), continental slope (300-10,000 feet), abyssal plain (>10,000 feet), abyssal hill (3,000 feet up from the abyssal plain), seamount (6,000 feet ...

Section 4: Sea-Floor Spreading, STUDY. Flashcards. Learn. Write. Spell. Test. PLAY. Match. Gravity. Created by. david-majeski. Terms in this set (5) mid-ocean ridge. an undersea mountain chain where new ocean floor is produced; a divergent plate boundary. sonar. a device that determines the distance of an object under water by recording echoes ...

Section 4: Sea-Floor Spreading Flashcards | Quizlet

Sea-floor spreading begins at a mid-ocean ridge, which forms along a crack in the oceanic crust. Along the ridge, molten material that forms several kilometers beneath the surface rises and erupts. At the same time, older rock moves outward on both sides of the ridge.

Chapter 1: Plate Tectonics Section 4: Sea-Floor Spreading Objectives: 1. Describe the process of sea-floor spreading. 2. Describe what happens to the ocean floor at deep ocean trenches.

Section 4: Sea-Floor Spreading - Ms. Lariviere's Grade 7 ...

3 Section 4.5 - Plate Tectonics 1. Explain the theory of plate tectonics. The theory of plate tectonics explains the formation, movement, and subduction of Earth's plates. Earth's lithosphere is broken into plates that are in constant motion. These plates float on the asthenosphere due to convection currents. This theory incorporates both the theory of continental drift and the theory of sea-
