Mass Transfer is clear in our digital library an online entrance to it is set as public consequently you can download it instantly. Our digital library saves in combined countries, allowing you to acquire the most less latency period to download any of our books with this one. Merely said, the solution manual principles heat and mass transfer is universally compatible later than any devices to read.

First, convert the 10 degrees Celsius to Kelvin. Next, apply Fourier's Law for heat conduction to solve for heat flux. $k=0.029$ W/m-K, $\Delta T= 283.15$ K, and $L=0.02$ m. This will give you 410.5675 W/m². Part b: Multiply your heat flux by the area and you get 1642.3W.
