Squid Dissection Lab Answers

# Read Free Squid Dissection Lab Answers

Squid have 8 arms covered with suction cups. The tentacles are longer than the arms and have suction cups only at the tips. These are used to pass food to the shorter arms and then to the mouth. The suction cups help the squid to hold onto food. The squid is related to other "shelled" animals like clams and snails.

### 04-23 MB07 LAB - Squid Dissection

Biology II Laboratory Report: Squid Dissection. Squid are marine cephalopods of the order teuthida. Like all cephalopods (cephalopod means head-footed) squid have a distinct head, bilateral symmetry, a mantle and arms. Also all cephalopods have well developed eyes and brain, their head projects into a crown or group of flexible, muscled, arms, well developed mouth with jaws and a hard parrot-like beak for tearing off food pieces, they are all active and quick predators found only in marine ...

## 30+ Best Squid dissection images | dissection, squid ...

Examine the exterior of the squid and note the 2 fins located at the dorsal end. These fins assist in locomotion and are used primarily to help the squid orient and steer itself through the water. In some squid, the fins also help to propel the animal. You may have to pull the fins away from the body to better observe them.
