"Dry stack" refers to a building technique using concrete blocks with no mortar between them. The surface on both sides is coated with a special high strength cement creating a "sandwich" construction that is extremely strong, stronger than even the typical mortar joint. This building technique was developed by the military in the 1950's.

#### Earth Song - Dry Stack Concrete Block Construction

It is among the most cost effective yet impervious home building materials available. Solid concrete walls work just as well but aren't as cost effective due to the expensive forms required. Dry-stacked walls are just as strong and much simpler for a DIY builder. With some dry-stack methods, conventional concrete blocks are simply stacked, and then locked into place by a coating of fiber-reinforced Surface Bonding Concrete (SBC) that is applied to both the inside and outside of the walls.

Douglas Fir is a very strong wood with a rich reddish heartwood. Generally tight growth rings, straight grain, medium heavy with good resistance to mildew and fungus. Due to its high strength, Fir is a perfect choice for both wall logs and beams and joists. Its weight may make transportation costs slightly higher.
