The trolley problem is a thought experiment in ethics about a fictional scenario in which an onlooker has the choice to save 5 people in danger of being hit by a trolley, by diverting the trolley to kill just 1 person. The term is often used more loosely with regard to any choice that seemingly has a trade-off between what is good and what sacrifices are "acceptable," if at all.

'The Trolley Problem' takes a philosophical problem and expands it out into a clever way to explain some philosophical ideas. The trolley problem is a question that has been asked for a while. A trolley is out of control. On the track ahead are five people, who for whatever reason, are unable to get out of the way.

~~Trolley problem — Wikipedia~~

The Trolley Problem sets up a moral dilemma in which one is to decide whether to steer the trolley in the first scenario, and whether to push the fat man off the footbridge in the second, so that one person dies as opposed to five. Those are the only options available.

~~The trolley dilemma: would you  
kill one person to save five?~~

The Trolley Problem is a moral  
paradox first introduced by  
Phillipa Foot 1967 and adapted by  
Judith Jarvis Thomson in 1985.

Let's look at it simply first. Pulling  
the lever would seem like the  
correct choice at first, since it  
only kills one person instead of  
five, but, if you do, you are  
directly causing that one man's  
death, and if you don't, you would  
have nothing to do with the five  
people's deaths.

From the Wikipedia page on the trolley problem: There is a runaway trolley barreling down the railway tracks. Ahead, on the tracks, there are five people tied up and unable to move. The trolley is headed straight for them. You are standing some distance off in the train yard, next to a lever. If you pull this lever, the trolley will switch to a different set of tracks.

The trolley problem is a question of human morality, and an example of a philosophical view called consequentialism. This view says that morality is defined by the consequences of an action, and that the consequences are all that matter. But exactly which consequences are allowable? Take the two examples that make up the trolley problem.

The Trolley Problem dives right into this core issue by describing a decision making scenario.

Utilitarianism is damaged as an ethical theory because it oversimplifies this decision, and other decisions like it, strictly on outcome. The Trolley Problem says that there is a runaway train hurtling towards five workers on a railroad track.

## ~~The Trolley Problem + Utilitarianism~~

The latest example is in the ethical dilemma of the trolley problem - if you have no other other choice, do you kill one person or five? does it change if you know the people? would you sacrifice one to save five? etc. - where Michael would try to kill all six people if he could, and do it as brutally as possible.
