From the instantaneous position $r = r(t)$, instantaneous meaning at an instant value of time t , the instantaneous velocity $v = v(t)$ and acceleration $a = a(t)$ have the general, coordinate-independent definitions; $v = \frac{dr}{dt}$, $a = \frac{dv}{dt}$. Notice that velocity always points in the direction of motion, in other words for a curved path it is the tangent vector. Loosely speaking, first order derivatives are related to ...
