The use of lubricants began in ancient times and has developed into a major international business through the need to lubricate machines of increasing complexity. The impetus for lubricant development has arisen from need, so lubricating practice has preceded an understanding of the scientific principles. This is not surprising as the scientific basis of the technology is, by nature, highly complex and interdisciplinary. However, we believe that the understanding of lubricant phenomena will continue to be developed at a molecular level to meet future challenges. These challenges will include the control of emissions from internal combustion engines, the reduction of friction and wear in and continuing improvements to lubricant performance and machinery, life-time. More recently, there has been an increased understanding of the chemical aspects of lubrication, which has complemented the knowledge and understanding gained through studies dealing with physics and engineering. This book aims to bring together this chemical information and present it in a practical way. It is written by chemists who are authorities in the various specialisations within the lubricating industry, and is intended to be of interest to chemists who may already be working in the lubricating industry or in academia, and who are seeking a chemist's view of lubrication. It will also be of benefit to engineers and technologists familiar with the

This book presents new directions in contemporary anthropological dream research, surveying recent theorizations of dreaming that are developing both in and outside of anthropology. It incorporates new findings in neuroscience and philosophy of mind while demonstrating that dreams emerge from and comment on sociohistorical and cultural contexts. The chapters are written by prominent anthropologists working at the intersection of culture and consciousness who conduct ethnographic research in a variety of settings around the world, and reflect how dreaming is investigated by a range of informants in ever more diverse sites. As well as theorizing the dream in light of current anthropological and psychological research, the volume accounts for local dream theories and how they are situated within distinct cultural ontologies. It considers dreams as a resource for investigating and understanding cultural change; dreaming as a mode of thinking through, contesting, altering, consolidating, or escaping from identity; and the nature of dream mentation. In proposing new theoretical approaches to dreaming, the editors situate the topic within the recent call for an "anthropology of the night" and illustrate how dreams offer insight into current debates within anthropology's mainstream. This up-to-date book defines a twenty-first century approach to culture and the dream that will be relevant to scholars from anthropology as well as other disciplines such as religious studies, the neurosciences, and psychology.

Comprehensive and up-to-date, the text integrates major construction management topics with an explanation of the methods of heavy/highway and building construction. It incorporates both customary U.S. units and metric ( SI) units and is the only text to present concrete formwork design equations and procedures using both measurement systems. This edition features information on new construction technology, the latest developments in soil and asphalt compaction, the latest developments in wood preservation and major health, safety and environmental concerns. Explains latest developments in soil and asphalt compaction. Presents the latest developments in wood preservation materials and techniques which respond to environmental concerns. Expanded and updated coverage of construction safety and major health hazards and precautions.
